Domain Setup Guide

Flames of Passion Entertainment

Prepared by: Marceau Solutions **Date:** March 2026

What This Guide Does

This guide walks you through pointing your domain to your website. Your website is already built and hosted for free — we just need to tell your domain where to find it.

Time needed: ~10 minutes **Difficulty:** Easy — just copying and pasting values

---

First: Figure Out Where Your Domain Is

Your domain might be in **Squarespace** or **Google Workspace/Google Domains**. Follow the section that matches.

OPTION A: Google Workspace / Google Domains

Step 1: Log Into Google Admin

1. Go to **admin.google.com** and sign in with the Google account you used to purchase the domain
2. If that doesn't work, try **domains.google.com** instead

Step 2: Find DNS Settings

If you're in Google Admin (admin.google.com):

1. Click **Domains** in the left sidebar

2. Click **Manage domains**
3. Click on your domain name
4. Look for **DNS** or **Advanced DNS settings**
5. If it says "DNS is managed by Google Domains" — click the link to manage DNS

If you're in Google Domains (domains.google.com):

1. Click on your domain name
2. Click **DNS** in the left sidebar

Step 3: Remove Any Existing A Records

- Look for any existing **A records** and delete them
- **Keep** any MX records (for email) and TXT records — don't touch those

Step 4: Add the 4 A Records

Click **Create new record** or **Add record** and select type **A**. Do this 4 times:

Record #	Host	Data (copy exactly)
1	`@`	`185.199.108.153`
2	`@`	`185.199.109.153`
3	`@`	`185.199.110.153`
4	`@`	`185.199.111.153`

Click **Save** after each one.

Step 5: Add the CNAME Record

1. Click **Create new record** or **Add record**
2. Select type **CNAME**
3. Enter:

Host	Data (copy exactly)
`www`	`marceausolutions.github.io`

1. Click **Save**

Now skip to "PART 2: Wait & Test" below.

OPTION B: Squarespace

Step 1: Log Into Squarespace

1. Go to **squarespace.com** and click **Log In**
2. Sign in with your account

Step 2: Go to DNS Settings

1. Click your **profile icon** (top right) and select **Domains**
2. Click on your domain name
3. Click **DNS** in the left sidebar
4. Click **DNS Settings**

Step 3: Remove Any Existing A Records

- If you see any A records, click the **trash icon** to delete them
- **Keep** any MX records and TXT records

Step 4: Add the 4 A Records

Click **Add Record** and select type **A**. Do this 4 times:

Record #	Host	Data (copy exactly)
1	`@`	`185.199.108.153`
2	`@`	`185.199.109.153`
3	`@`	`185.199.110.153`
4	`@`	`185.199.111.153`

Click **Add** after each one.

Step 5: Add the CNAME Record

1. Click **Add Record**
2. Select type **CNAME**
3. Enter:

Host	Data (copy exactly)
`www`	`marceausolutions.github.io`

1. Click **Add**

Step 6: Cancel Your Website Subscription (Optional — Saves Money)

If you're paying for a Squarespace website plan, you can cancel it since your website is hosted for free. Your domain stays active separately.

1. Go to **Settings** > **Account & Billing** > **Billing**
2. Click **Cancel Subscription**
3. This only cancels the website builder — your domain stays active

---

PART 2: Wait & Test

Step 6: Wait for DNS to Propagate

- **Usually:** 15–30 minutes
- **Worst case:** Up to 48 hours (rare)

Step 7: Test Your Domain

1. Open a browser in incognito/private mode
2. Type in your domain name

3. You should see your Flames of Passion website!
4. Also try with `www.` in front

If it's not working after 30 minutes:

- Double-check the IP addresses for typos
- Make sure old A records are deleted
- Clear your browser cache or try a different browser

Step 8: Text Me When It's Working!

Once you see your website on your domain, text me so I can:

- Turn on HTTPS (the padlock icon)
- Make sure everything looks perfect

Need Help?

If you get stuck, just text or call:
